

**For technicians working on
vehicles from 3.5-7.5 tonnes**

irtec is an independent and renewable accreditation scheme that assesses the competence of technicians working in the commercial vehicle, trailer and passenger carrying industries.

Developed and delivered by IRTE (Institute of Road Transport Engineers) and IMI (Institute of the Motor Industry), irtec is the premier technician accreditation scheme for the road transport industry.

An irtec licence certifies the individual, rather than the employer, and irtec is based on current competence, so licences expire after 5 years.

irtec light for Inspection Technicians offers a way for LCV fleet and workshop managers to independently prove the competence of their technicians. It aims to raise the standard of technicians in the fast-growing LCV sector, promoting safe operation and best practices.

The irtec process

Practical assessments are carried out at an irtec-approved centre, although they can be carried out in the workplace (under controlled conditions) by an irtec-approved assessor.

Once accredited, irtec technicians agree to abide by the irtec code of conduct, receive a licence card, certificate and are placed on the irtec technicians register at www.irtec.org.uk. They are then eligible to apply for a Halfords Trade Card.
